RE: Ideal LanTEK III Series Cable Certifier approval

Mr. Dan Payerle

This letter is to acknowledge receipt of a set of Ideal LanTEK III Cable Certifiers with the latest link and channel adapters that were sent to CommScope Laboratories for evaluation. We have evaluated the LanTEK III using these new link and channel adapters for testing standards based electrical transmission parameters of CommScope copper cabling. We have demonstrated direct correlation with lab tests and have concluded that these cable analyzers are suitable for field use of certifying installed cabling channels and permanent links up to and including Category 6A / Class EA performance.

We look forward to a continued cooperation and future opportunities to evaluate Ideal products that can be used to test and certify CommScope installations.

This notice will be forwarded to the CommScope Infrastructure Academy and made available to the CommScope network of Business Partners.

Sincerely,

A handwritten signature in black ink that reads "Gary Irwin". The signature is written in a cursive, flowing style.

Gary Irwin
